WIRELESS AND PRINT

An installed ink tank cannot be removed until the message to replace it is displayed. Print speed becomes slower for the sake of preventing damage of a print head when ink draws to an end (after displaying the ink low message). When scanning or copying a certain volume of documents continuously from the ADF, the printer may switch to 'waiting mode' in which paper feeding stops for several tens of seconds after each scan, in order to prohibit overheating of the paper feeding mechanism of the ADF. The timing of the 'waiting mode' may vary depending on scan settings such as colour/mono, resolution and so on.

In case of the default settings (scan or copy in colour, 300dpi), the printer switches to 'waiting mode' after approx. 80 A4 sheets of paper feeding continuously or repeatedly in short period.

filled with ink from the initial set of ink bottles. Page yield may vary depending on texts/photos printed, applications software used, print mode, a combination of the ink tank/ink cartridge size and type of paper used. Using non-genuine inks may affect the printer's performance and/or the print quality. In some rare occasions, although there are no safety issues, using non-genuine inks has caused overheating of the print head and smoke emission from the print head due to the absence of an ingredient found in genuine ink. (Does not apply to usage of all non-genuine inks).

7. For the G series Yield is combined for CMY colors. For GM2070, GS070 and G6070 individual yield for printing on 4"6 is also mentioned. 8. All yields published as per data available for July 2018. 10%–15% deviation in yields is within acceptable limits. 9. Print yields may differ for changes in coverage area, print patterns and print shades. All mentioned print yields are taken for ideal print conditions as mentioned in the ISO documents.
